Sidney Medrano

Senior Software Engineer · Full-stack

PROFILE

Full-stack software engineer with 5+ years building the internal systems companies run on: time tracking, HR workflows, APIs and the automation around them. I maintain a platform used every day by ~7,000 staff, modernize legacy code without breaking what people depend on, and use AI-assisted development with guardrails that keep releases safe. Open to remote work.

EXPERIENCE

Senior Software Engineer I · Cloudstaff Modern Workforce Inc. — Jul 2022 – Present

- Develop and maintain StaffCentral (~7,000 users): time tracking, leave, holidays and log corrections on a large CakePHP 1.3 codebase.
- Build request-and-approval workflows, such as holiday calendar requests with configurable approval routing, and HR/Operations reports.
- Ported production endpoints from a legacy CakePHP 3 user-management service to a Laravel 12 API with exact behaviour parity, so consumer apps switched without rewrites.
- Contribute to Phoenix (Laravel + Angular): APIs, features, and decommissioning a legacy integration service.
- Optimize SQL queries and application performance on large attendance data sets.
- Automate business and development workflows with n8n; cover critical flows with Playwright end-to-end tests.
- Built an AI-assisted development harness on Claude Code: framework skills, branch and release guardrails, and a skeptic code-review agent.

Laravel · CakePHP · PHP · Angular · React · Vue · jQuery · MySQL · Docker · AWS

Software Engineer I · Bizmates Philippines Inc. — Jan 2022 – Jul 2022

- Converted PDF lesson material into structured, reusable HTML/CSS for a web-based classroom platform.
- Built frontend features in Nuxt.js with a Laravel backend, keeping lessons responsive and consistent across devices.

Computer Programmer I · Mariano Marcos State University — Sep 2019 – Jan 2022

- Built and maintained internal systems: POS, inventory, payroll, document repository and COVID-19 contact tracing.
- Full-stack Laravel and Vue with MySQL, with newer systems in React; automated administrative processes.
- Trained users and provided support, fixes and enhancements for deployed systems.

IT Staff · The Black Nazarene Hospital, Inc. — Mar 2019 – Sep 2019

- Built systems for patient records, surveys and inventory (Laravel, React); provided IT support and system training for staff.

SELECTED PROJECT

POS Inventory Platform · personal project — 2026

A multi-branch POS and inventory platform: an 85-endpoint Laravel 13 API serving a web back office, an offline-first Electron desktop app and a React Native mobile app. Live demo at sidneymedrano.vercel.app.

SKILLS

Backend	Laravel, CakePHP 1.3 / 3.x, PHP, REST APIs, Auth
Frontend	React, Vue, Angular, Nuxt, jQuery, Tailwind, Bootstrap
Data	MySQL, query optimization, reporting
DevOps	Docker, AWS, Git, GitHub Actions, n8n
Quality	Playwright E2E, code review, staged releases
AI	Claude Code, GitHub Copilot, custom agents

EDUCATION

BS Computer Science · cum laude
Mariano Marcos State University · 2014 – 2018

TRAININGS

Visual Graphics Design NC III · GitHub Training · AWS Training
