5+ yrs	~7,000	4 stacks	Cum laude
building production web apps	staff on the system I maintain	Laravel · React · Vue · Angular	BS Computer Science, MMSU

01 Profile

I build and maintain the internal systems companies run on: time tracking, HR workflows, APIs and the automation around them. Most of my work is careful change on large, long-lived codebases, adding features without breaking what thousands of people depend on, and bringing AI agents into the workflow with guardrails.

02 Experience

Senior Software Engineer I
Jul 2022 – Present

Cloudstaff Modern Workforce Inc.

- Develop and maintain StaffCentral (~7,000 users): time tracking, leave, holidays and log corrections on a large CakePHP 1.3 codebase.
- Build request-and-approval workflows with configurable routing, plus HR/Operations reports.
- Ported production endpoints from a legacy CakePHP 3 service to a Laravel 12 API with exact behaviour parity, so consumer apps switched without rewrites.
- Contribute to Phoenix (Laravel + Angular): APIs, features and decommissioning a legacy integration service.
- Optimize SQL and application performance on large attendance data sets.
- Automate workflows with n8n; cover critical flows with Playwright E2E tests.
- Built an AI-assisted development harness on Claude Code: framework skills, release guardrails and a skeptic code-review agent.

Software Engineer I
Jan 2022 – Jul 2022

Bizmates Philippines Inc.

- Converted PDF lesson material into reusable HTML/CSS for a web classroom platform.
- Built Nuxt.js frontend features on a Laravel backend, responsive across devices.

Computer Programmer I
Sep 2019 – Jan 2022

Mariano Marcos State University

- Built POS, inventory, payroll, document repository and COVID-19 contact tracing systems.
- Full-stack Laravel and Vue with MySQL, newer systems in React; trained and supported users.

IT Staff
Mar 2019 – Sep 2019

The Black Nazarene Hospital, Inc.

- Built patient records, survey and inventory systems (Laravel, React); trained hospital staff.

Skills

BACKEND
Laravel · CakePHP · PHP · REST APIs · Auth

FRONTEND
React · Vue · Angular · Nuxt · jQuery · Tailwind · Bootstrap

DATA
MySQL · Query tuning · Reporting

DEVOPS & QA
Docker · AWS · GitHub Actions · n8n · Playwright

AI
Claude Code · GitHub Copilot · Custom agents

PERSONAL · 2026

POS Inventory Platform

An 85-endpoint Laravel 13 API serving a web back office, an offline-first Electron desktop app and a React Native mobile app. Live demo on the portfolio.

Education

BS Computer Science
Cum laude · MMSU · 2014 – 2018

Trainings

Visual Graphics Design NC III
GitHub Training
AWS Training
